

Swan implements next generation cybersecurity solution for an Indian fashion house.

Industry: Fashion

Head Quarter: Mumbai, India

Client: An Indian fashion house

Objective:

- Implement APT and Anti-spam solutions
- Web content filtering
- Data Loss Prevention
- Application filtering
- Removable disk control

Service Provider : Swan Solutions (Mumbai)

Solution:

- Cloud-based Sophos Central
- Sophos Endpoint Protection
- Intercept X
- Sophos Server Protection
- Sophos Full Disk Encryption
- Sophos Email Security

Results:

- Instant access to information
- Faster response time
- Strengthened Cyber resilience
- Single management console for emails

With older endpoints protection products due to expire, the customer was looking to deploy a new cloud-based solution for managing day to day activities for their Head office end point as well as stores Point of Sale (PoS) machines. The solution also had to be easy to roll out across multiple locations.

Customer was looking for solution which could provide them with Antivirus, Web content filtering, Application Filtering, Removable disk control, encryption, and Data loss prevention.

Customer is using Office 365 email solution and was looking for Advance persistence threat, and Anti-Spam solutions for their emails along with protection of their 80 servers from any cyber security threats and ransomware attacks.

Swan provided the client with a complete and easy-to-manage endpoint security solution with better data control. We also provided comprehensive threat and data protection for the company's multiplatform environment — freeing it to focus on its business.

Challenges

- To secure 900 end points of their head office and store locations along with their 80 plus servers from malicious cyber threats.
- Secure their employees emails from Advance persistence threats and spam emails.
- Website content filtering to strengthen cybersecurity defences, increase productivity and prevent HR issues before they begin.

Approach

- **Cloud-based Sophos Central** A unified console for managing a range of Sophos products.
- **Sophos Endpoint Protection** Blocks malware and infections by identifying and preventing the handful of techniques and behaviours used in almost every exploit.
- **Intercept X** Signature less anti-exploit, anti-ransomware, and root cause analysis that protects endpoints from advanced threats.
- **Sophos Server Protection** protects server environment from malicious attacks while keeping your servers running at optimum performance. Designed to secure business- critical servers, Sophos Server Protection includes server application whitelisting, advanced anti-malware, and behaviour analysis.
- **Sophos Full Disk Encryption** provides centralized management for full disk encryption with the ability to centrally manage device encryption for BitLocker and File Vault.
- **Sophos Email Security** is a cloud email security delivered simply through Sophos central's east-to-use single console which helps the customer in securing their people's emails from unwanted and malicious email threats.

Business Benefits

- Instant access to information and faster response times due to alerts increased productivity and the quality of output of work.
- The ability to log in and act from anywhere provided flexibility and agility which helped the client in faster decision making.
- An almost invisible footprint that makes no difference to system performance.
- The Sophos cloud-based suite has strengthened cyber resilience and built layered security approach which has helped to protect the organisation against outside threats.
- Protection from unwanted and malicious email threats was provided with Sophos email powered by artificial intelligence and delivered simply through Sophos Central's easy-to-use single management console.
